Sales by Region

Sales by Segment

Sales for ShopWave have shown an upward trend from 2020 to 2023, with seasonal fluctuations. March, June, September, and December experience peak sales due to promotions and festive shopping. Conversely, February, April, July, and October recorded lower sales. Understanding these trends enables better inventory management and marketing strategies.

The Consumer segment contributes 51.50% of total revenue, followed by Corporate (30.22%) and Home Office (18.28%). The Central region leads with \$2.8 million in sales, while North Asia records the lowest at \$847K. These insights highlight the importance of regional market dynamics and consumer behaviour in driving business success.

The product category analysis identifies Chairs, Storage, and Phones as the best-selling items in their segments. Lower-performing products could be improved through targeted discounts, bundling, or marketing efforts. By leveraging data-driven sales strategies, ShopWave can further enhance its market reach and profitability.

2. PROFIT ANALYSIS

Yearly Profit

Profit by Category per Year

Profit Margin vs Discounts

Profit by Region

Profit \$17,817.39 \$311,048.31

Profit by Country

Profit by Segment

Profitability has increased from \$248.9K in 2020 to \$504.4K in 2023, reflecting strong financial performance. However, tables have incurred losses due to high production costs, excessive discounting, and lower demand. In contrast, copiers remain the most profitable product, demonstrating strong margins and consistent demand.

Regional profitability aligns with sales performance, with the Central region generating the highest profits. At the country level, China leads in profitability, contributing \$150,535. These insights emphasize sustaining growth in high-performing areas while addressing inefficiencies in low-margin product categories.

Profit margins generally increase with discounts, but tables remain unprofitable despite high sales volumes. This suggests that discounting strategies should be reassessed to prevent margin erosion. By refining pricing strategies and focusing on high-margin items, ShopWave can sustain its upward profit trajectory.

3. LOGISTICS EFFICIENCY

Order Priority
vs shipping costs

Shipping Costs w.r.t Sales

Ship Mode	Sales	Shipping Cost	Shipping Cost wrt Sales
First Class	1,827,897	307,651	16.83%
Second Class	2,560,286	313,401	12.24%
Standard Class	7,574,073	614,320	8.11%
Same Day	666,989	115,903	17.38%

Delivery Status

Early	22.60%
Late	40.59%
On-Time	38.63%

Delivery Status
Early → If the order is shipped within 2 days of the order being placed.
On-Time → If the order is shipped between 3-4 days after ordering.
Late → If the order is shipped more than 4 days after ordering.

Delivery Cost
over the years

Average Shipping Cost to Countries

Logistics efficiency is crucial to ShopWave's operations, with Standard-Class shipping being the most widely used but having the highest late shipment rate. While First-Class and Same-Day shipping provide faster delivery, they come at significantly higher costs. A balanced strategy is required to optimize both cost and efficiency.

Currently, 40.59% of shipments are delayed, compared to only 38.63% arriving on time, while 22.60% of orders arrive early. These inconsistencies highlight inefficiencies in dispatch and fulfilment processes. Shipping costs have surged from \$34K in Q4 2020 to \$159K in Q4 2023, influenced by rising fuel prices and supply chain disruptions.

A geographic breakdown reveals that Chad has the highest shipping cost per order at \$149.90, likely due to low order volume. Addressing these inefficiencies through regional distribution centres, bulk shipping discounts and optimized delivery routes will help control costs while maintaining service quality.

4. CUSTOMER ACQUISITION & RETENTION

Customer acquisition has increased steadily, but Canada lags behind other regions in new customer growth. This suggests the need for region-specific marketing efforts to boost acquisition rates in underperforming markets. A strategic approach to market expansion will ensure continued customer base growth.

Customer segmentation analysis shows that the Consumer segment has the highest Customer Lifetime Value (CLV), reinforcing the need for retention-focused strategies. The data also highlights opportunities in the Corporate and Home Office segments, which could benefit from targeted promotions and personalized customer engagement initiatives.

In Q1 2021, customer growth declined by -29.90%, likely due to COVID-19. Implementing recovery strategies—such as loyalty programs, exclusive offers, and improved customer support—will help sustain engagement. Maintaining a balance between customer acquisition and retention is key to sustainable growth.

Legend Actual Estimate

Sales and profit forecasts suggest continued business growth, provided strategic optimizations are made. However, widening error bars in forecast models indicate potential economic uncertainties or shifting consumer behaviours. ShopWave must remain adaptable to market trends and adjust its strategies accordingly.

Regional profit margins present mixed trends. Canada's profit margins have declined from 30.37% in 2021 to 25.88% in 2023, requiring cost-control measures. Meanwhile, high-margin regions like Central and North America remain strong, reinforcing the importance of focusing resources on profitable markets.

On a product level, Copiers and Phones remain top-performing items, while Tables and Bookcases continue to underperform. Prioritizing high-margin products and adjusting pricing for weaker categories will ensure a more sustainable profit model. Dynamic pricing and demand forecasting can enhance ShopWave's resilience.
